

1.3.6. Age distribution, by sex and province – 2018, 2019, 2020

From 2018 to 2020, a setback with respect to the share of children, who enrolled in secondary primary education at the age between 6 to 11, to all enrolled children regardless of their age at country level is observed. Country level rate differs across provinces and genders with respect to the size of the changes in the rate of secondary education at the right age and the direction of the trend as well. See all the tables in the corresponding excel files.
