CENSUS OF POPULATION AND HOUSING 2009 RELEASE

(Vanuatu National Statistics Office, Ministry of Finance and Economic Management, 31 August 2010)

“Vanuatu hemi kaontem yu”

2009 CENSUS RELEASE SPEECH

Good afternoon representatives from <<government ministries and agencies, non-government organisations, donor agencies, the media>>, and it is an honour and a privilege for me to welcome you all here today for this historic occasion and the launching of the Census of Population and Housing 2009 basic counts.

Ladies and gentlemen

In November of last year everyone in Vanuatu participated in the national Census to provide the basic demographic, social and household information that forms the backbone of a large number of statistics used for government planning and decision making. Officers from the Vanuatu National Statistics Office interviewed every member of every household from Hiu, the northern most island of Vanuatu, to Aneityum in the south. This would not have been possible without the invaluable financial and technical assistance provided from UNFPA, and the Governments of Australia and New Zealand as well as that from regional institutions such as SPC in Noumea.

Over the past 9 months the Vanuatu National Statistics Office has been working very hard to translate the information collected in the Census questionnaires to computerised databases to allow for the full analysis of the population and housing of Vanuatu.

Ladies and gentlemen

I am very proud to stand before you all today and provide you all information from the 2009 Census for the first time. Our population is now 234,023, which represents an average annual growth rate of 2.3 percent per year since the last Census in 1999.

We all know that our urban centres and municipalities are growing at a fast rate and since 1999 the urban population has increased by 42 percent or an average of 3.5 percent per year since 1999; or about 1,400 people a year. These Census figures do not reflect the recent evolution of Lenakel into a municipality or urban area to enable comparison with the 1999 Census.

The population in rural areas is increasing as well, but not as fast as the rate in urban areas. Since 1999 the rural population has increased by 21 percent or 1.9 percent on average each year which is about 2,750 people a year.

The overall proportion of the population living in rural areas has decreased slightly since 1999, with 76 percent of the population now living in rural areas compared with 79 percent in 1999.

From the 2009 Census it is very interesting to note that Torba, the northern most province has one of the highest average annual growth rates outside of Shefa and Sanma. On average every year since 1999 the population of Torba has increased by 1.9 percent. The province with the fastest annual growth rate since the 1999 Census is Shefa which has increased on average by 3.7 percent each year, and this includes Port Vila.

The 2009 Census counted Vanuatu's population living in 47,373 households which means that, on average, 4.8 people live in each household in Vanuatu. This is a decrease from 5.1 people on average per household in 1999.

These basic population counts are very important for monitoring progress against basic development goals and the 2009 Census results clearly show that regardless of location Vanuatu will continue to face the challenges of population growth in both urban and rural areas for some time to come.

This is the first of many such 2009 Census releases the Ministry of finance and economic Management will be holding. As more information is finalised from the 2009 Census I have asked that the newly appointed Government Statistician, Mr Simil Johnson, and his team make us all aware of it. Incidentally, I would like to take this opportunity to congratulate Simil on his recent permanent appointment to the Government Statistician post which he has been filling for over four years.

Ladies and gentlemen

In closing again I want to remind of the importance of the population and housing census statistics to Vanuatu and want to thank again all the people involved in the Census who can justifiably be proud of their achievements in the population counts released here today: the Zone Curriculum Advisors from the Ministry of Education who provided supervision of the data collection activities; the Census interviewers for their efforts in conducting the interviews and completing the census questionnaires, the National Statistics Office staff in the Census project who through the magic of Information Technology (IT) converted the paper questionnaires into the database and finally, last but in no means least, every man, woman and child in Vanuatu who participated in the Census on the night of 16 November 2009.

Thank you.

Hon. Sela Molisa

Minister of Finance and Economic Management

Republic of Vanuatu

Official release of the 2009 census on population and housing

On 16 November 2009, the 5th national census of Vanuatu was undertaken by the National Statistics Office.

Taken every 10 years, the census information is an important development planning resource available to Government, Province and Local Administrations, International Agencies, NGO's, businesses, communities and the general public.

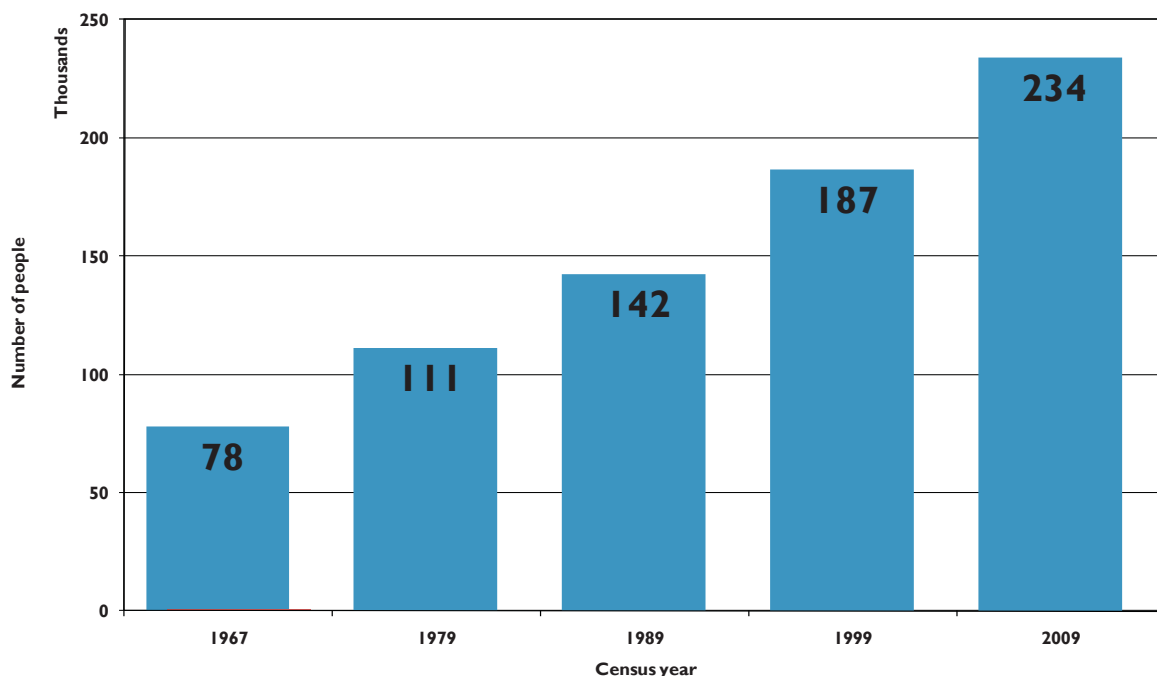

Topics include: number of people by age and sex and residence, marital status, religious denomination, birthplace, labour force status, occupation, industry, mother tongue and languages spoken, educational characteristics, number of children ever born and whether still alive, livestock owned, crops grown, housing and household characteristics, and other areas.

This is the first of a series of Bulletins designed to disseminate findings of the 2009 Census of Population and Housing. More information is forthcoming and will be made available in other publications, and in other formats including CD.

A summary of key results shows:

The population of Vanuatu increased by 47,345 people from 186,678 in 1999 to **234,023** in 2009. This represents a growth rate of 2.3 percent per annum.

Lakatoro (678) 5618498

Lenakel (678) 88117

Website: www.vanuatustats.com

The population count of the different provinces and by urban-rural residence was as follows:

Figure 2: Population size by place of residence, Vanuatu: 2009

The **urban population** was comprised of **24.4 percent** of the total population in 2009, an increase from 21.5 percent in 1999. The urban population increased from 40 thousand people in 1999 to **57 thousand** in 2009. There clearly was an urban to rural drift.

The number of **private households** increased from 36,415 in 1999 to **47,373** in 2009, while the average household size decreased from 5.1 persons per household in 1999 to **4.8** in 2009.

There were 119 thousand males and 115 thousand females counted during the census.

Attached are selected tables and graphs as basic information to compliment this summary release. The final tables will be available in the **2009 Census Main Report** due to be published on **October 1st 2010.**

For queries, please do not hesitate to contact the National Statistics Office on the contacts provided below or visit the website for available data and information.
